

The Medicine of Mental Imagery

by
Loretta Siani, Ph.D.

The *medicine* of mental imagery conveys a healing message that radiates into the mind in a subtle fashion. Its symbolic pictures, bypass the analytical, skeptical conscious mind, and speak a thousand words directly to the unconscious mind where all healing takes place.

The mind doesn't know the difference between imagination and reality. It takes its orders from the thoughts dwelled upon in the mind - especially those thoughts dwelled upon with strong emotion. These thoughts become the blue print for action for the body (the unconscious) to carry out.

The healing thoughts and images created by hypnotherapy sessions referred to below, create a state of deep relaxation in the listener. These images are delivered in a loving voice and speak words of truth, love and forgiveness to the listener. Healing has aptly been defined as the simple application of love to the hurt.

All of these hypnotherapy sessions are accompanied by scientifically designed sounds that produce a profound level of deep relaxation. These sounds coupled with the soothing voice of Dr. Siani and the metaphorical imagery used all work to help undo the inner obstacles that are prevent you from living a healthier, happier, more fulfilled life. They are particularly salutary when used in concert with any traditional medical treatment you are receiving.
